Batch Corrected Embeddings + Synthetic cells from Strand-seq

Hyunjin Cho, Integrated Master's and Ph.D. Program
Systems Biology and Bioinformatics Laboratory, Yonsei

Introduction: Lack of Methods for Batch Corrected Embeddings in Strand-seq

"Functional analysis of structural variants in single cells using Strand-seq"

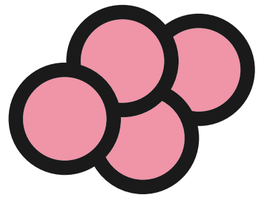

Nature Biotechnology

NO → ChromVAR + Dimension Reduction → Batch correction

These embeddings are based only on NO (chromatin accessibility or motif accessibility)

"It does not incorporate the genome instability of each cell"

clone

StrandVI Architecture
